Spring hinge repairs

Spring mechanisms can be replaced

to preserve the spring effect....

As you might already know, you can now offer your patient to have the entire spring mechanism replaced when their spring hinge comes apart. This service is available for both plastic and metal temples.

Due to this new option it is very important that you **specify which type of repair** you would like us to do. If nothing is specified, we will do a Standard Repair. With the Standard Repair, we can offer to **lock the spring on the other temple** to achieve a better fit after repair, just let us know.

Usually we charge per frame regardless of the number of welds needed, but when replacing the entire spring mechanism, we will have to charge per side.

To see all our other services, check our web site on:
